

Grant focus

Advancements in **Cancer Research** and **Cell Therapy** development

Priority given to projects that focus on:

- Deciphering the disease
- Focusing on diagnostics
- Advancing treatment
- Improving cell therapy

The 2023 award includes:

- Six-month placement of the MARS Bar instrument
- Supply of cell isolation reagents* and consumables
- Comprehensive training
- Application development support
- Ongoing assistance from a dedicated Application Scientist

The package holds a value
over **\$30 000**

*Cell separation reagent kits chosen from Applied Cells' portfolio with a total value not exceeding \$8000.

Advancements in **Cancer Research** and **Cell Therapy** development

About the Grant

CellQuest is a prestigious grant opportunity targeting scientists across clinical research disciplines, with a special focus on cancer research and cell therapy development. This grant aims to provide instrumental and reagent support, as well as recognition, to outstanding projects demonstrating the potential to drive breakthroughs in these fields.

DECIPHERING THE DISEASE

Exploring the Tumor
Microenvironment

FOCUSING ON DIAGNOSTICS

Understanding Circulating
Tumor Cells

IMPROVING CELL THERAPY

Improving Protocols for Cell-Based
Interventions

ADVANCING TREATMENT

Tailored Approaches for Therapy
